MARKING GUIDE FOR LESSON 26

Activity

1. Give the meaning of agro forestry.

Agroforestry is the growing of useful trees together with crops and rearing of animals on the same piece of land but on different plots

2. What features should a tree planted alongside crops have?

- I. **Should be able to grow quickly.**
- II. **They should bear a lot of leaves**
- III. **They should have deep growing roots to prevent them feeding on plant nutrients.**

3. Why should trees planted with crops have deep growing roots?

To prevent them from feeding on plant nutrients

4. How do crops benefit from trees planted together with them?

Crops with weak stems get extra support from trees

Crops get shade from trees

Trees protect crops against strong wind

5. How do trees contribute to rain formation that benefits crops?

Trees provide water vapour through transpiration

6. How do animals benefit from agro forestry?

I. **Animals get shade from trees**

II. **Animals get oxygen from crops**

III. **Animals get food from crops**

7. How does a farmer benefit from agroforestry?

A farmer gets double income
